

# Making a Garbage Bag Kite

What you need

- Plastic bag
- String
- Two light weight sticks
- Scissors

## How to

First step is to Choose sticks that are thin, lightweight and relatively straight. They should be similar in size to the plastic bag. On your daily walk children can take part by hunting for sticks that are suitable.

Use the string to tie the sticks into a cross

Cut out the plastic bag to fit around the crossed sticks and tie each end of the bag around the ticks using the string to make a triangle.

Lastly tie a long string at the end of your kite to fly it with in the wind.

If you would like to make a kite that is a little easier then you can attach some string to the handle of a plastic bag then you can fly your kite outside.
