

Fruit Sorting/counting

What you need

- Paper
- Range of coloured apples of different coloured fruits.
- Coloured pencils markers

Draw a simple three Column graph with pictures of the fruits you want you child to put into that Column.

Group the all the fruits alongside the paper and ask your child to pick out for example all the green apples in one column all the red ones in another. If using a verity of fruits instead of apples ask the child for example to pick out all the pears, kiwis, and grapes.

While counting children should be encouraged to **count** each fruit as they add them to the graph

This activity can also be done with children sorting the fruits into different baskets or bowls while counting them.
